GOAL OF EVALUATION

Provide the evidence needed to both validate the program model implementation and to set baselines for evaluating implementation at other program sites.

DESIGN

Data to assess implementation and provide baseline statistics:

- Intake and selection data to determine alignment of program participants with target population
- Survey conducted to determine program engagement
- Analysis of program outcomes, specifically recidivism and job retention

METHOD

Mixed methods approach employing qualitative analysis of internal document, meta analysis of relevant literature, and correlational study of quantitative data using internal client data and risk assessment results.
